Hero

(replaces "Map the skill. Map the mind.")

Eyebrow: Powered by Prepzo AI, our own 120B model

Headline: An AI counsellor for every classroom in India.

Subhead: Prepzo shows students the career paths they are genuinely built for, and gives teachers a real helping hand with their everyday work. One platform, built for the Indian education context.

Buttons: Book a Demo · See How It Works

Badges: - Guidance for every student - A helping hand for teachers - Our own 120B model

The Problem

(replaces "India's Readiness Blind Spot")

Heading: India's guidance gap

Body: Every year, millions of students walk into the biggest decisions of their lives with nothing real to guide them. Science or commerce. This degree or that one. Which career is even theirs to chase. At the same time, teachers lose most of their week to admin instead of teaching. Guidance, at the scale this country needs, simply does not exist. That is the gap we are closing.

Stat strip: - 5M+ graduates enter the workforce every year - ~45% considered job-ready - Almost none get real career guidance

Sub-blocks:

Students, the guidance gap Most students never get honest, personalised guidance on what they are good at, where they need to grow, or which paths actually fit them. They choose on instinct and pressure, not on data.

Teachers, the time drain Teachers spend too much of their week on admin, prep, and grading instead of teaching. The work that drew them in gets squeezed out by the work that did not.

Institutions, the blind spot Universities and placement cells run season after season with no clear, semester-long view of where each cohort actually stands. By the time the gaps show, it is too late to act.

The Solution

(replaces "One platform. A precise mind-map per student.")

Heading: One AI counsellor, for students, teachers, and the institutions around them.

Body: Prepzo replaces guesswork with guidance. For the student, a counsellor that knows their strengths and their path. For the teacher, a helping hand that gives their time back. For the institution, a clear view of where every cohort stands, getting sharper every week.

Feature cards:

A counsellor for every student Prepzo understands how each student thinks, where they are strong, and where they need to grow, then shows them the career paths they are genuinely built for, including the ones no one ever told them about.

Real strengths, real gaps Every session becomes a clear, honest picture of where a student is sharp and where they drift, down to the exact concept that needs work. No vague scores, just signal they can act on.

A helping hand for teachers Lesson plans, assignments, and slides on a single command. Prepzo takes back the hours lost to admin and shows teachers exactly where their class needs help, before it shows up in a result.

Built for institutions Placement and academic teams get a clear, department-wide view of readiness: the cohorts that are on track, and the students who need attention right now.

Our own 120B model Prepzo runs on our own 120 billion parameter model, built in-house and grounded on the Indian education context. Not a chat wrapper on someone else's API, a model built for this exact job.

Gets sharper every week Prepzo is a loop, not a one-time test. Every session feeds the next, so the guidance gets sharper and cohorts keep improving all semester.

More on the way We are rolling out new features continuously, built from what students, teachers, and institutions actually ask for. The platform you see today is the smallest it will ever be.

How It Works

(replaces the six-step "Process" section, same flow, warmer language)

01 Onboarding Students sign in through their institution's Prepzo portal, set up by department and year. Simple, secure, single sign-on.

02 Understanding the student Resume, target role, and academic record become a starting picture of where each student is today and where they want to go.

03 A real session Prepzo runs an adaptive, voice-first session. Reasoning, communication, structure, and subject depth, all in one sitting.

04 The honest picture Every answer is read closely and turned into a clear map of strengths and gaps, down to the moment something broke down.

05 A personal plan Prepzo returns a specific plan: the drills, lessons, and next target tied to the exact gaps it found.

06 Direction that lasts Students build a profile they can stand behind. Institutions see how every cohort is moving, all semester.

Closing line: The loop repeats every cycle. The picture sharpens, the gaps shrink, and the student walks in ready.

Why Prepzo

(replaces "Static prep portals offer drills. Prepzo offers a brain map.")

Heading: Static prep gives drills. Prepzo gives direction.

Body: One platform: adaptive sessions, honest per-student guidance, a helping hand for teachers, and a dashboard institutions can actually act on.

Comparison rows (Prepzo vs others): - Adaptive, voice-first sessions - Honest per-student guidance - A helping hand for teachers - Institution-wide dashboard - Resume to profile intelligence - Department-level view - Personalised improvement plan - Semester-long readiness view

Built on our own model Prepzo runs on our own 120 billion parameter model, built in-house and tuned for guidance, not chat.

Stat strip: - 120B, our own model - [Insert a real, verifiable number, see "Verify before publishing"] - [Insert a real, verifiable number] - [Insert a real, verifiable number]

The flywheel Every session sharpens Prepzo. More students, more signal, a sharper model, better guidance, more institutions. Over time, Prepzo becomes the guidance layer Indian education is built on.

Testimonials

(Important: see "Verify before publishing." Use only real, named, consented quotes. If the current quotes are not from real users who agreed to be named, remove them before this goes live.

Template below for real ones.)

Heading: Heard from students, trusted by institutions.

Quote template:

"[Real quote in the person's own words.]" [Name] · [Role] · [Institution]

Pricing

(keep the "request a plan" model, add the free-for-students hook)

Heading: Built for institutions. Priced for them. Free for students.

Body: Every institution is sized differently, and so is every cohort. Tell us a little about yours and we will send back a plan that actually fits. Students never pay to use Prepzo.

Button: Request a tailored plan

Form fields (unchanged): I'm reaching out as a (University / TPO Cell / Teacher / Student) · Full name · Email · Institution · Cohort size · What are you looking to solve?

Reassurance line: We reply within one business day. No spam, no autoresponders.

Talk to Us

(replaces "Let's Talk Readiness")

Heading: Let's talk.

Body: Universities, placement cells, teachers, and students, drop us a line. We will get back to you within one business day.

- Email: connect@prepzo.space
- Phone: +91 6378763168
- Location: India, serving institutions pan-India

Who should reach out:

Universities and placement cells Cohort-level guidance and a clear command centre for your team.

Teachers A helping hand for lesson plans, content, and seeing where your class needs help.

Students Find your strengths, see your gaps, and the career paths you are built for.

For Schools

Buyer: principal, trustee, or school owner. Hero of this page is the student counsellor and the teacher helping hand.

Hero

Eyebrow: For schools

Headline: Every student guided. Every teacher supported.

Subhead: Prepzo gives your students a personal AI counsellor to find the path they are genuinely built for, and gives your teachers a real helping hand with the everyday work that eats their week. Built for the Indian school context.

Buttons: Book a Demo · See How It Works

The Problem

Heading: The two quiet problems in every school

Body: After Class 10, students choose science, commerce, or arts with almost nothing to guide them, a decision that shapes the rest of their lives, made on instinct and pressure. And teachers, the people who should be teaching, lose most of their week to lesson prep, worksheets, and grading. Schools feel both problems, but neither is anyone's job to fix. That is what Prepzo is for.

Sub-blocks:

Students choose blind Stream and subject decisions get made without any honest sense of a student's own strengths, interests, or where they could actually thrive.

Parents want guidance you cannot staff Real career counselling needs trained people most schools simply do not have, and parents increasingly expect it.

Teachers are stretched thin Hours every week go to prep and grading instead of teaching, mentoring, and the students who need attention.

Features

A personal counsellor for every student Prepzo understands how each student thinks and where they are strong, then guides the decisions that matter, stream, subjects, and the careers they are genuinely built for, including the ones no one ever told them about.

AI guidance that unlocks real potential Every student gets clear, personalised guidance toward their real strengths, so they can see and reach a potential they did not know they had.

Real-time tracking Students, teachers, and parents see strengths and progress in real time, not once a term when it is already too late to act.

A helping hand for every teacher Lesson plans, worksheets, homework, and slides on a single command. And teachers can analyse how the class is doing and foresee exactly where it is falling behind, before it ever shows up in a result. The hours lost to admin, handed back.

Guidance parents can see Clear, honest reports that show parents their child's strengths and direction. The counselling your school can now offer without hiring for it.

Safe with children's data Built for younger students from the ground up: parental consent, strict privacy, and compliance with India's data protection rules. The student owns their data, and the school is its trusted custodian, never the product.

Our own 120B model Prepzo runs on our own 120 billion parameter model, built in-house and grounded on the Indian school curriculum and boards. Not a general chatbot, a model built for this.

More on the way We are rolling out new features continuously, built from what schools, teachers, and parents actually ask for. The platform you see today is the smallest it will ever be.

Call to Action

Heading: Give your school guidance and support it could never staff for.

Body: Tell us about your school and we will show you what Prepzo looks like in your classrooms. Students never pay.

Button: Book a Demo

For Universities

Buyer: TPO cell, placement officer, university leadership. Hero of this page is placements and readiness. This is closest to your current site, warmed up.

Hero

Eyebrow: For universities and placement cells

Headline: Walk into placement season knowing exactly where every student stands.

Subhead: Prepzo gives your students a personal AI counsellor, and gives your placement team a clear, semester-long view of readiness, so you act on the gaps before the season, not after. Built for the Indian higher-education context.

Buttons: Book a Demo · See How It Works

The Problem

Heading: Placement season, run blind

Body: Millions of graduates enter the workforce every year, and only about half are considered job-ready. The reason is simple: no one maps what each student actually knows, what they do not, and how it changes over a semester. Placement cells run season after season with no early signal, and by the time the gaps show, it is already too late to act.

Stat strip: - 5M+ graduates enter the workforce every year - ~45% considered job-ready - Weeks of early warning, not a season-end surprise

Features

A counsellor for every student Prepzo shows students their real strengths, their gaps, and the roles they are genuinely built for, then a clear plan to close the distance.

Student AI Every student gets their own AI, available any time, that knows their profile and guides them day to day, from doubts to decisions.

Cognitive mapping Prepzo maps how each student thinks and reasons, turning a single session into a clear picture of strengths, gaps, and the exact concept that needs work.

Adaptive aptitude testing Aptitude assessment that adapts to each student and places them accurately, not the same generic drill for everyone.

Internships and job opportunities Readiness should lead somewhere real. Prepzo surfaces internships and roles matched to each student's profile, so the work turns into outcomes.

Hackathons and challenges Students sharpen their skills and build a real track record through hackathons and challenges on the platform.

A command centre for your team A department-wide dashboard: cohort readiness, weekly movement, and the names that need attention right now.

Built for institutions Deploy across departments and years, with single sign-on and access managed by your placement cell.

Our own 120B model Prepzo runs on our own 120 billion parameter model, built in-house, grounded on the Indian context and tuned for guidance and structured assessment, not chat.

Gets sharper every week A loop, not a one-time test. Every session feeds the next, so cohorts keep improving all semester.

More on the way We are rolling out new features continuously, built from what students and institutions actually ask for. The platform you see today is the smallest it will ever be.

Call to Action

Heading: Stop guessing who is ready. Start the season ahead.

Body: Tell us about your institution and cohort size, and we will send back a plan that fits. Students never pay.

Button: Request a tailored plan

Settle these once, across the home page, both sub-pages, the deck, and your spoken pitch. They are the lines that cost credibility if they are wrong or inconsistent.

Fixed facts (must match everywhere)

1. **Model size.** The live site says 70B. Everything here says 120B to match your pitch. Pick the true number and make every surface agree.
2. **Testimonials.** Use only real, named, consented quotes. Remove anything invented or attributed without permission.
3. **Stats.** "85+ readiness," "3x," "22 point jump," and any time-saved percentage need real data or they come out. The 5M graduates and ~45% job-ready figures should carry a source.

Emphasis that shifts by page

1. **Traction (Jodhpur, 35,000+ students) is higher-education proof.** Use on Home and For Universities. Do not present it as school proof on For Schools.
2. **Employability stats (5M, ~45%) are university-only.** They do not belong on For Schools, where students are years from the workforce.
3. **The teacher helping hand is the hero for schools, a footnote for universities.** School teachers do heavy daily prep, so it lands there. University faculty are research-led, so keep it light or off that page.
4. **Children's data matters far more for schools.** Foreground consent, privacy, and protection of minors on For Schools. It is both required and a selling point to principals and parents.
5. **The 60% time-saved number** stays as "the hours teachers lose to admin, given back" until you have real data to state the percentage.
6. **Internships, jobs, and hackathons.** If these are not live yet, present them under "more on the way" rather than as current features. And per your standing rule, make no claims about the size of any recruiter or hiring partner network.
